

Machine Introduction

RHW1000/1200J full automatic overall coating machine has experienced technical upgrades based on the original three-roller coating machine. With frequency conversion control adopted for metering roll, oiling volumes for papers of different thickness can be controlled through different linear velocity, straightforward and easy to operate, and it achieves fundamental changes in the surface fineness and smoothness of coating products without orange peel veins by and large, thus optimizing polishing products.

Features:

1. STREAM FEEDER (with high speed feeder 8000 sheets/hour)
2. SHEET CLEANING UNIT : The standard model is with water cleaning unit, Wheel brush and electric heating is the optional function. Remove the remaining dust after printing. Dusting function, add to the evenness and smoothness after the paper is glazed.
3. BASE COATING UNIT : (can choose air-knife to fit 80-600g sheets coating) smear the foundation oil, to fill up the capillary function of the paper surface. Add the adhesiveness force between UV layer and the oil ink. Reduce the penetration of UV coatings, to keep the paper white. Saves the precious UV oil consumption. Bottom oil coating head can do water/oil coating standard configuration: control point start operation, paper roll, pneumatic stop sword scrapping oil.
4. AUTOMATIC CONSTANT TEMPERATURE IR LIGHT-BOX : Infrared drying equipment, can make drying homework after bottom oil coating. The whole independent wind room air suction, Teflon conveyor mesh belt corrects automatically.
5. UV GLAZING UNIT : (optional: wind knife, accomplish the thinnest with 80g paper) The main glazing roller passes polishing, light oil coating is exquisite smooth, the measuring applicator roller speed adjustment, make the light oil coating amount of precision is effectively controlled, and adjustment is very simple and stable, and save light oil. The machine stops automatically when paper rolls, automatic constant temperature UV tank, independent red-tipped air suction import conveyor belt, pneumatic scrape oil knife.
6. UV DRYING MACHINE UV ultraviolet radiation, can make the UV light oil produce sclerosis, wear-resisting, prompting paper surface light. The whole air suction, make the product in quick transfers and grid synchronization, avoid products in transfers because taking bits and cause non-conforming. The standard function: automatic deviation, every conveyor mesh belt, light-box opened automatically control, UV light solid equipment cooling system, to ensure the UV lamp of normal use life. Optional function: the UV lamp half/whole lamp automatic conversion (when paper transfer machine works all the lights/standby when half light), The UV lamp timer help manage the service life of UV lamp, be helpful for the product quality control.
7. AUTOMATIC DELIVERY UNIT : Conveyor belt produces low noise and make delivery smooth with its upper and lower pressing track design. Smearing on thin paper tends to produce curling, yet the pneumatic sheet jogging device knocking up booth sides of sheet and keep the paper stable.

Technical Specifications

Model	RHW-1000J	RHW-1200J
Max. sheet size	940×940mm	940×1140mm
Min. sheet size	340×406mm	340×406mm
Max. coating width	950mm	1150mm
Paper thickness	250-600gm ² 105-600gm ²	250-600gm ² 105-600gm ²
Max. feeder speed	IR3600mm 45m/min	IR3600mm 45m/min
Dimension	17000x2100x1940mm	17000x2300x1940mm
Total weight	8000kg	9000kg
Total power	89kw	89kw
