

Machine Introduction

The machine is used for folding and gluing of two separate (A, B) sheets to form a corrugated carton Boxes. It is running steady with strengthened servo system, high precision parts, easy for installation and Maintenance. It is widely used for big carton box.

Product Feature

- Feeding section: Feeder is controlled by two separate servo motors; also, with the help of suction design (paper is fed by several thick belts and feeding motors). Feeding is continuous, accurate and efficient with this system.
- Gluing section: three sets of gluing units. Two sets of gluing units are for supplying parallel glue line to connect two sheets, one unit supply hot melt adhesive and another unit supply cold water adhesive. The third unit is for supplying side glue to form carton box. Those gluing units make the carton stick more stable and firmer.
- Folding section & Pressing part: Manual folding, then feed the glued and folded carton to pressing part.
