

Machine Introduction

Hot Foil Stamping and Die Cutting Machine is a kind of special equipment used for thermo-printing and creasing various products, such as cardboard, leather and plastic etc.

It is suitable for thermo-printing various paper products with electrochemical aluminum and also used as a creasing and die cutting machine for mould cutting and creasing cardboard cases and boxes. Concave-convex thermo-printing of various high-grade and fine printed products can also be conducted on this machine for obtaining stereoscopic exquisite and beautiful packing and decorating products.

The machine is controlled by a chip microprocessor. With the foil-feeding rubber roller of electrochemical aluminum driven by the separately set length and leapfrog parameters to make the most effective using of electrochemical aluminum. The purpose of this model is to ensure that the system runs stably and reliably so that the machine can be maintained easily and simply.

Technical Specifications

Max. die cutting size	750x520mm
Max. foil stamping size	740x510mm
Speed	26±3 pcs/min
Power	10.2 kw
Voltage	380V
Weight	2500 Kgs
Overall dimension (LxWxH)	1450x1900x1950mm

* Warna dan spesifikasi mesin bisa berubah sesuai dengan perubahan spesifikasi pabrik.
