

Machine Introduction

IMPRINT digital printing machine is a professional digital printing press which has strong versatility and high productivity. This machine, whose output equals the offset printing, has characteristics of low cost, high efficiency, clear and accurate image, also can fully meet the growing commercial printing demand. IMPRINT provides you unlimited space and professional job output. Friendly troubleshooting interface wizard let you quickly become an expert on maintenance and operation.

IMPRINT has the capability to process large number of different papers from plain paper, matt coated paper, offset paper or other specialty paper such as dermatogen paper, wove paper, ice white, pearlescent paper, and stickers

Features

- Carefully Designed Dry Two-component Developing Unit
- New Polymeric Resin Toner
- Seamless Transfer Belt
- Large Format Paper Size
- Long-lived and Durable Photosensitive Drum
- New Oil-free Fixing Unit
- Density Self-control Function on Rendition Image
- Replace Toners without Turning off the Machine
- Straightforward Paper Jam Solving Interface Wizard
- Combined Unit Design
- Efficient Printing Management Function

New Polymeric Resin Toner

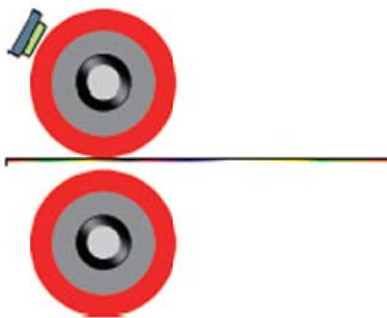

Innovative and original IMPRINT hyperfinepolymerization toner particles are smaller. Their diameters are controlled within 6.5 micron and their distributions are more even. That is using fewer toners when printing high quality files, to get stunningly sharp text and images, fine lines, smooth surface, outstanding luster, which are fully comparable with offset printing. At the same time, low toner price makes you face fierce market competition with ease.

Conventional Toners

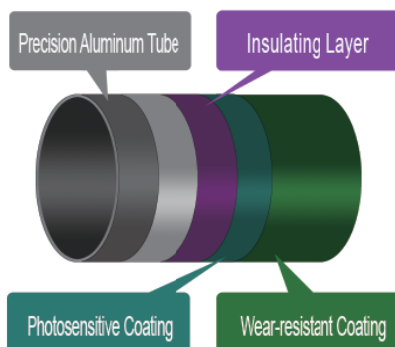

Hyperfine Resin Polymerization Toners

Double-roll Oil-free Thermoregulation Fixing

Double-roll oil-free fixing technique is adopted. According to different requirements of printing carriers, you can set fixing temperature through the touch screen, so that the output images are vivid, the stability and firmness of thick papers fixing are enhanced. You can use a pencil or pen to write on the printings directly. Without affecting the finishing, laminating, bronzing, or UV glazing can be easily completed. It fully meets the requirements of various commercial use.

Long-lived and Durable Photosensitive Drum

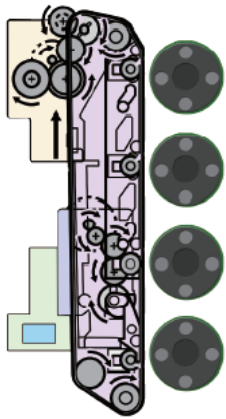

Using advanced OPC coating materials makes drum more durable, not easy to wear during high-speed operation. Constant potential is suitable for mass production. Price and service life of the drums also directly affect the cost of printing. Many objective tests show that not only the price of the super wear-resisting drums in IMPRINT is lower than the market price but also the service life is longer. Due to the scientific and reasonable structure design, IMPRINT performs excellently and stably when printing large jobs.

Seamless Transfer Belt

The seamless transfer belt, linear touching transfer and toner cleaning system can effectively remove the residual toner on the transfer belt to maintain transfer belt surface in the best condition and realize high quality output. In addition, transfer belt can transfer image on the whole surface, as to realize highly efficient production. Perfect combination of photosensitive drums and seamless transfer belt make the equipment more stable in the production. Because the seamless transfer belt has elasticity, there is no force between the transfer belt and the photosensitive drums, which greatly prolongs the service life of the two parts.

Technical Specifications

Printing Mode	Tandem Electrostatic Indirect Transfer Printing
Preheating Time	About 360 seconds (slightly change according to the different environment temperature)
Paper Capacity	500 Sheets * 3 Trays + 250 Sheets + 3000 Sheets X 2 Large Paper Feed Cabinet
Paper Format	100*148mm - 330*488mm
Density Adjustment	Automatic and Manual
Fusing	Roller Fixing
Developing Mode	Dry, Two-component Magnetic Brush Developing
Printing Speed	65 Sheets/Min (A4)
Copy Feature	Zoom Ratio Mediates between 25%-400% by 0.1% Growth
Paper Weight	62-300g/m ²
Noise Level	Max 73dB
Machine Size	Length:2251mm Width:992mm Height:1480mm
Power	AC220V/16A
Power Consumption	Max 3500W
Weight	About 450KG

Required Server Specifications (Not included with the machine)

Type	External
CPU	Intel Quad-core i7, frequency 4GHz, cache 8MB
Operating System	Windows Server 2003 SP4, Windows 7, Windows 10, MacOSX v10.3.9 or later
Memory	16GB DDR3 1600
Hard disk	2TB SATA3 + 256GB Solid state drive
Network	2x RJ45 Gigabit Network Interface
Interface	USB3.0 Interface

Safety usage notice:

- Professional installation only, do not try to install without professional help
- This machine is for commercial printing purpose only not intended for home usage
- Use rated supply voltage
- Use correct grounded power to prevent explosion and electric shock
- Do not use or install the machine in damp, dusty, soot environment
- Connect the machine according to the regulations
