

(Input the sizes of box, the machine will automatically setting)

Machine Introduction

The automatic mold adjustment molding machine is the latest box packaging equipment developed by our company based on the original equipment. The biggest advantage of this machine is that the outer dimensions (length, width, and height, etc.) of the top cover can be input on the touch screen. The action of the corresponding parts such as, cornering, etc. is automatically in place, and has the functions of memory and storage, which saves the time for mold change.

Structural features:

1. The main drive adopts dual servo drives, stable operation, flexible and adjustable forming and folding, suitable for carton and paper thickness of various structural sizes, and high operational stability.
2. The depth of the inner folding paper is widely applicable, flexible and adjustable without rebound, and the folding range is between 10-90mm.
3. The four sides of the bubble-pressing position adopt the up and down displacement, the previous bubble-pressing and then sinking the bubble-pressing left and right.
4. The structure of the cornering part is connected to the pressure foam board and adjusted before leaving the factory, and boxes of different sizes do not need to be adjusted separately during production.
5. The multi-function box-making mode can complete the diagonal, center and left-right corners.
6. The ejection device adopts the cylinder synchronous operation mode, which runs smoothly, and the ejection structure is simple by adopting automatic air exchange servo for ejecting the box.

B-500

Box Wrapper Machine With Auto Setting

Technical Specifications

Model	B-500
Max box size	450x400x120mm
Min box size	60x80x10mm
Turn in size	10-90mm
Turn in box height	90mm
Speed	0-25p/min
Motor Power voltage	2kw/220v
Air pressure	10L/min 0.8mpa
Machine Dimension	1500x1000x2000mm
Weight of machine	1000kg

* Warna dan spesifikasi mesin bisa berubah sesuai dengan perubahan spesifikasi pabrik.
