

Operating principle

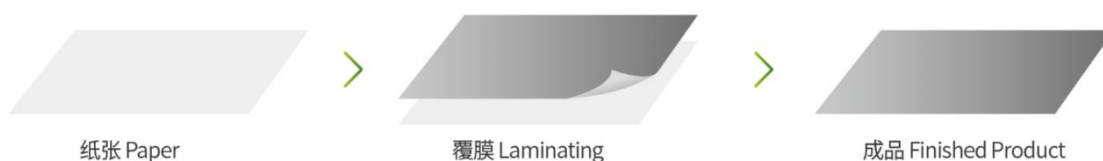

Machine Introduction

Automatic thermal laminating machine, laminate pre-coated/ thermal film on paper sheets to protect printed matter from pollution and damage, and protect the packaging more luxury and exquisite, is widely used in packaging and printing industries. The automatic thermal laminating machine is very simple to operate, easy to maintain, and has high production efficiency, and is ideal equipment for packaging & printing enterprises.

Features:

- Automatic feeding and delivery system, fully automatic operation, high speed, high quality, high production efficiency.
- Reduced time costs and labor costs in handling and loading materials, due to the elimination of manual operation.
- Intelligent computing and film pulling systems reduce material waste and improve material utilization.
- Flexible and adjustable for different thickness of BOPP film.
- Curved paper output system, vibrate delivery system make the paper delivery more orderly
- Split Machine structure, easy to maintenance

Technical Specifications

Model	FL-1100	FL-880	FL-760	FL-560
Max. Paper size	1100x1050mm	850x1050mm	760x700mm	560x700mm
Min. Paper size	280x280mm	280x280mm	230x210mm	230x210mm
Paper Thickness	105-500gsm	105-500gsm	100-500g/m2	105-500gsm
Max. speed	60m/min	60m/min	50m/min	50m/min
Total Power	29kw	32kw	22kw	22kw
Machine Weight	5300kg	4000kg	3200kg	2700kg
Dimensions	5500x2000x1800mm	5500x1850x1800mm	4800x1730x1800mm	4800x1530x1800mm

Samples:

Adopt BOPP thermal film/pre-coated film for lamination, to protect the printing effect, waterproof and stain proof, widely be used for cosmetics boxes, calendars, food packaging boxes, books, magazines, posters, medicine boxes, tobacco boxes, business cards, etc, making the packaging more exquisite and stronger.

Machine Details:

1. Feeding Part

- Using fully automatic Feeder to complete paper feeding, it can be used for 100-500 grams of paper.
- The feeder is from good brand, has high quality, high precision, high flexibility, and can be slightly adjusted to quickly and accurately transfer paper.
- The pre-stacker pile makes paper feeding more convenient.

2. Paper Delivery Table

- Suction devices reduce friction and static electricity during paper transportation, guarantees the paper feeding smoothly.
- High strength belt, less prone to wear and deformation, making transmission smoother. Commonly used brands, easy to purchase and replace.

3. Side Gauge

- Side lay with high sensitivity sensors detect paper positioning, making lamination actions more precise.
- Servo motor control system combines side lay guarantees the precision of paper overlap.

4. Anti-curvature Device

- The automatic laminating machine is equipped with an anti-curl device, which ensures paper remains flat and reduces error rate during the lamination process.

5. Laminating Section

- High quality roller heating, smooth and stable, with more even heating and even pressure, making the film coating effect better and more stable.
- Split design is easier to clean, making the next lamination process smoother and more effective.

6. Separation Section

- Pneumatic separation system, with IR sensor ensures the paper separation stably and quickly.
- Spring punch knife makes the cutting processing more film efficient

7. Paper Delivery Part

- Automatic paper stackers collect laminated paper sheets orderly and fast.
- Automatic paper delivery system reduces manual operation and makes it easier and more convenient.

8. Electromagnetic Part

- Equipped with advanced electromagnetic heating system, which is fast pre-heating, energy saving, and environmental protection.
- Big brands of electronic parts ensure stable performance during the working period, and are convenient to maintain and replace when accessories broken.
