

Machine Introduction

The JZ-20031 twin loop wire forming machine produces double wires of a wide range of diameters and different pitches, using nylon-coated wire from spools. The wire is unwound from a spool, straightened and smoothed by the special rectifying tools of the machine and then is guided via guide rollers into the forming unit where the wire is formed into zigzag carpet and further to C shape profile the double wire loops formed. The endless double wire connecting from the forming machine, via the connecting table to the spooling machine. The connecting table is to “sense” the length of the formed double wire loops and to control the spooling machine when and how fast to wind.

Technical Specifications

Model	JZ-20031
Speed of service	350-500
Power source	220V/50Hz
Main motor power	0.75/Kw
Net weight	350kg
Dimension	2700x750x1510mm

* Warna dan spesifikasi mesin bisa berubah sesuai dengan perubahan spesifikasi pabrik.
